MODELS 106-A-TYPE 2 / 206-A-TYPE 2 ONE-WAY FLOW ALTITUDE CONTROL VALVE

KEY FEATURES

- No overflows high level shut-off maintained to close tolerances
- Superior repeatability
- Positive shut-off
- Easily serviceable at ground level

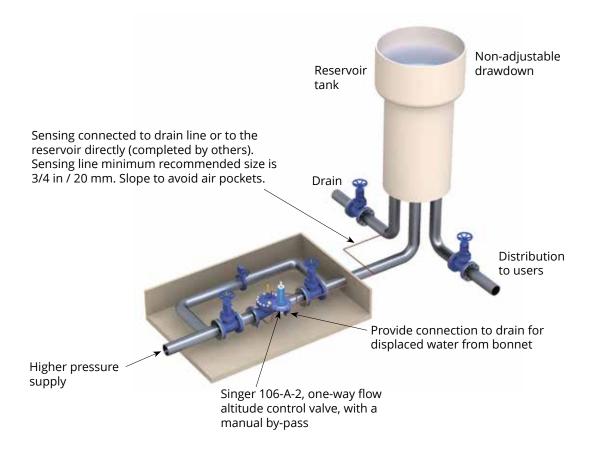

PRODUCT OVERVIEW

The 106-A-Type 2 and 206-A-Type 2 altitude control valves are based on the 106-PG or 206-PG main valve and are ideal for maintaining a preset maximum water level.

The valve functions as a two position control valve, either fully open or fully closed. The Type 2 valve allows normal forward flow to fill the reservoir to the maximum level and then closes drip-tight at the set-point. It opens to refill the tank once the level drops a fixed distance below the high water level.

Note: This valve does not operate as a check valve to prevent reverse flow.

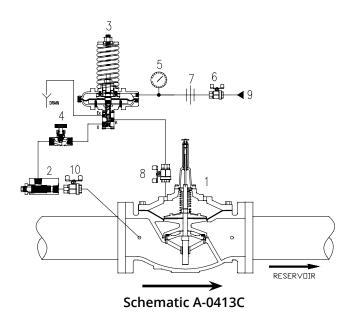

TYPICAL APPLICATION

2016.1

SCHEMATIC DRAWING

- Main Valve 106-PG or 206-PG with X107 position indicator
- 2. Strainer 40 mesh stainless steel screen
- 3. Model 301-4 Altitude Pilot
- 4. Closing Speed Control
- 5. Altitude Gauge
- 6. Isolation Valve
- 7. Union
- 8. Isolation Valve
- Sensing connection to reservoir (complete in field by others)
- 10. Isolation Valve

STANDARD MATERIALS

Standard materials for pilot system components are:

- Ductile Iron
- Stainless Steel
- Brass
- Copper

SELECTION SUMMARY

- 1. Generally select line size to minimize losses during normal forward flow.
- Use the performance curves and sizing bulletin to determine the pressure drop across the valve.
- 3. Maximum continuous flow 106 is 20 ft/s / 6 m/s, 206 is 16 ft/s / 5 m/s. Consult Singer Valve if higher flows are expected.
- 4. The pilot system exhausts to atmosphere ensuring the valve opens fully; requires that the displaced volume of water be taken to drain with each opening.
- 5. Select pilot spring range. Standard (301-4) is 10 to 60 ft / 3 to 18 m. Specify for 301-4 ranges 4 to 20 ft / 1 to 6 m, 40 to 125 ft / 12 to 38 m, 60 to 220 ft / 18 to 67 m.
- 6. Level drop required to open: 1 ft to 3 ft / 0.3 m to 0.91 m approximate.
- 7 If the fill line discharges below the reservoir surface, an internal drop check or separate check valve is suggested. This prevents return flow on loss of supply pressure.

ORDERING INSTRUCTIONS

Refer to page 244 for the order form and ordering instructions.

Additionally, include the following information for this product:

- 1. Single chamber (106) or (206)
- 2. Pilot range
